Both my husband and I tan easily, so we don't wear sunscreen. If I had fairer skin or simply wanted to wear sunscreen for some reason, I'd use one of the products in this guide.

Instead of using zinc oxide (which is found in most traditional sunscreens), all of these sunscreens are made with non-nano zinc oxide. Unlike standard (nano) zinc oxide, non-nano zinc oxide does not penetrate the skin or enter the bloodstream.

The base of these sunscreens is grass-fed tallow. Tallow is loaded with vitamin A, D3, K2, E, and B12, great for the skin, known to fight off wrinkle-producing free radicals, and has a natural SPF of 4.

These sunscreens have a rating of anywhere from 10-50 SPF. Some are scented and some are not.

# did you find this product guide useful?

These product guides were created to make sourcing nutrient-dense food and shopping for low-toxic household products easy.

Each product guide is clickable, so you can shop right from the PDF. If available, I include discount codes and bulk purchasing options that will give you the most savings.

If you're familiar with my [Discounts page](#), note that the below guides include those products, plus many more. While the [Discounts page](#) includes the products my family and I personally use, these product guides provide other options for families and people with a variety of needs.

## IF SO, CHECK OUT MY OTHER PRODUCT GUIDES HERE.
